

WMS 2026 Full Programme

Version: 07/10/26

WMS 2026 Poster Sessions, Short Oral Presentations, Clinical Trial Updates and Industry Symposia are not EACCME accredited. Details of these sessions are in the full Congress programme appendix.

Programme Key:

INV	Invited Speaker
O/LBO	Selected Oral Presentation/Late Breaking Selected Oral Presentation
SP	Short Oral Presentation
P/LBP	Poster Presentation/Late Breaking Poster Presentation (on display at the venue and on the virtual platform)
eP	ePoster Presenter (on display at the venue and on the virtual platform)
VP/LBVP	Virtual Poster Presentation/ Late Breaking Virtual Poster Presentation (on display on the virtual platform and on ePoster boards at the venue, outside of the scheduled poster sessions)
ICP	Interesting Case Presentation

Please note, all times stated in the programme are in local Hiroshima, Japan time (JST).

Monday 28 September 2026

08:30-19:00	Pre-Congress Teaching Course (separate registration required) 📍 Orchid Ballroom 3, ANA Crowne Plaza

15:30-16:00	Short Oral Presentations 1 📍 Ran Congenital myopathies, mechanisms and therapies SP01-SP05 <i>Moderator: Yukari Endo, Juntendo University, Japan</i>	Short Oral Presentations 2 📍 Cosmos 1 Toxic and inflammatory myopathies SP06-SP09 <i>Moderator: Olivier Benveniste, Sorbonne Université, France</i>	Short Oral Presentations 3 📍 Cosmos 2 DMD treatments SP10-SP15 <i>Moderator: Aoki Yoshitsugu, National Center for Neurology and Psychiatry, Japan</i>	
16:15-17:00	Congress Debate 📍 Phoenix Hall Can the neuromuscular field discontinue the use of animals in research? <i>Moderators: Francesco Saverio Tedesco, University College London, GOSH and the Francis Crick Institute, United Kingdom</i> 13INV Hidetoshi Sakurai, Center for iPS, Japan 14INV Emma Rybalka, Victoria University, Australia <i>The WMS Congress Debate has quickly become one of the most popular elements of the entire scientific programme. This year, the debate will tackle a critical and timely question that strikes at the very heart of translational science: Can the neuromuscular field discontinue the use of animals in research?</i> <i>For decades, animal models have served as the cornerstone of drug discovery and disease modelling. However, persistent translational gaps, where promising preclinical breakthroughs fail in human clinical trials, coupled with major regulatory shifts such as the FDA Modernization Act 2.0 and rapid advances in human iPSC technologies, 3D bioengineered tissues, and Microphysiological Systems (MPS), have brought us to an historic crossroads.</i>			

	Should we completely transition away from animal models in favour of human-centric, non-animal methodologies to accelerate effective therapies for patients? Or do animal models remain an irreplaceable necessity for capturing complex, systemic physiology that can vary across the lifespan, that cannot yet be fully replicated on a chip? Is a future without animal testing a logical, scientific evolution... or an unrealistic ideal? The debate team includes world-renowned experts in muscle biology and translational research: Hidetoshi Sakurai (Japan), who will argue in favour of discontinuing the use of animals in research, and Emma Rybalka (Australia), who will be arguing against, with expert moderation by Francesco Saverio Tedesco (UK). In an effort to demonstrate differing viewpoints, as well as to educate and entertain, Hidetoshi and Emma will intentionally present extreme positions that may not convey their actual and nuanced perspectives on this important issue. To round off this interactive discussion, the debaters will offer their genuine reflections on the future of disease modelling and present their insights regarding the real-world complexities of translational research. We encourage members of the audience to participate in the live polling and discussion. Please join us for what we are sure will be another Congress highlight!
